

# What are the differences between using Teams alone and using a combination of Teams + wordly.ai?

An Evershine IT Consulting & BPO Service Guide for Global Multilingual Meetings

# Evaluating Real-Time Interpretation Setups

Choosing the right meeting architecture depends on understanding the fundamental differences in three key areas of operation.

## Translation Mechanism

How the audio is captured and processed within the software.

## Language Capacity

The total volume of active speaker languages supported simultaneously.

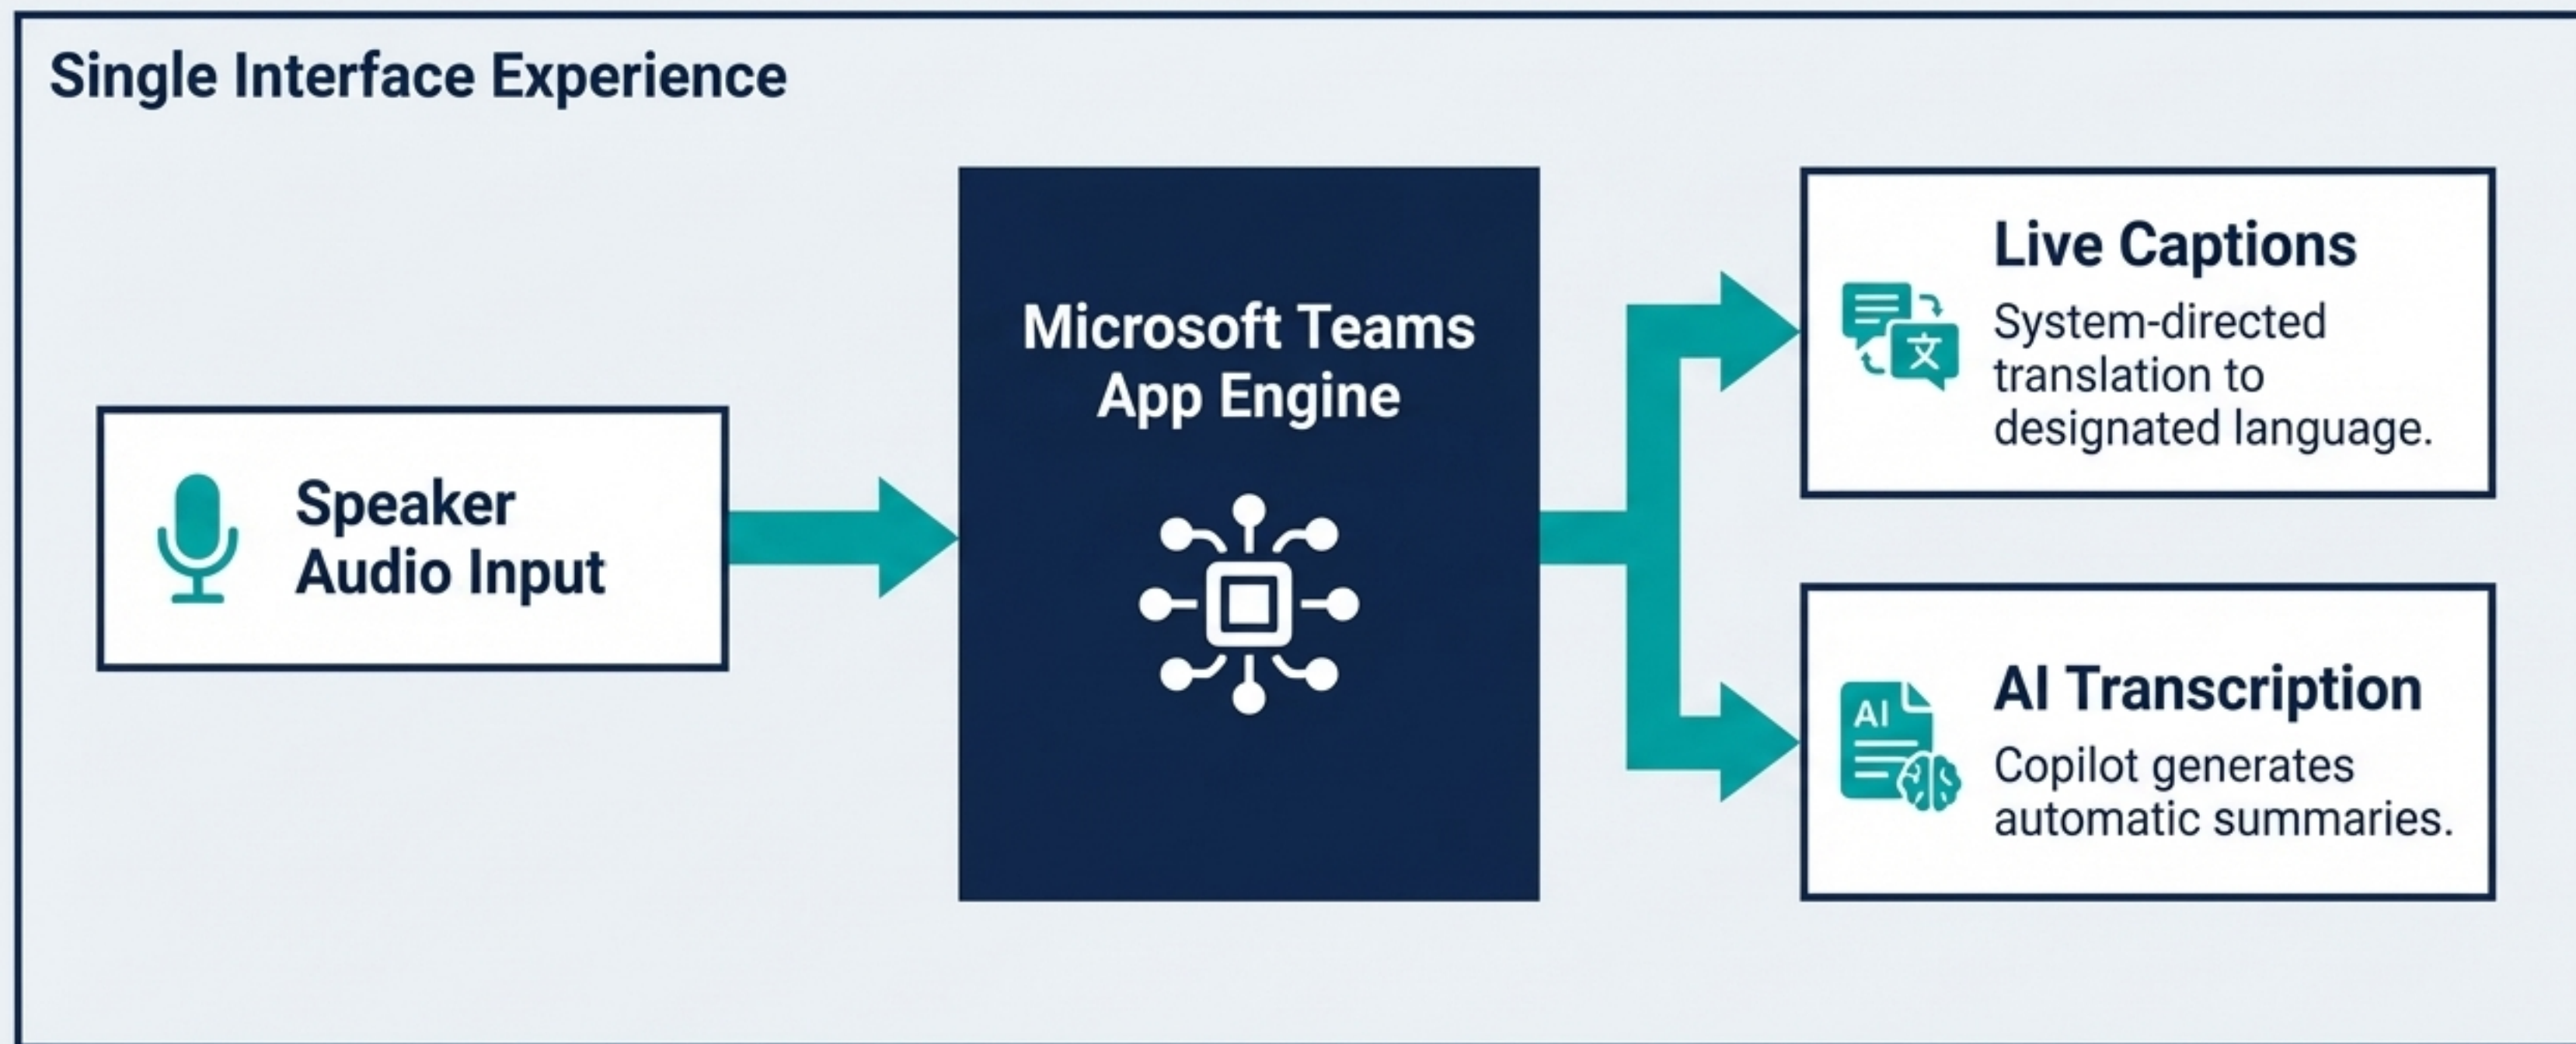

## Viewing Experience

How attendees physically interact with and read the translated text.

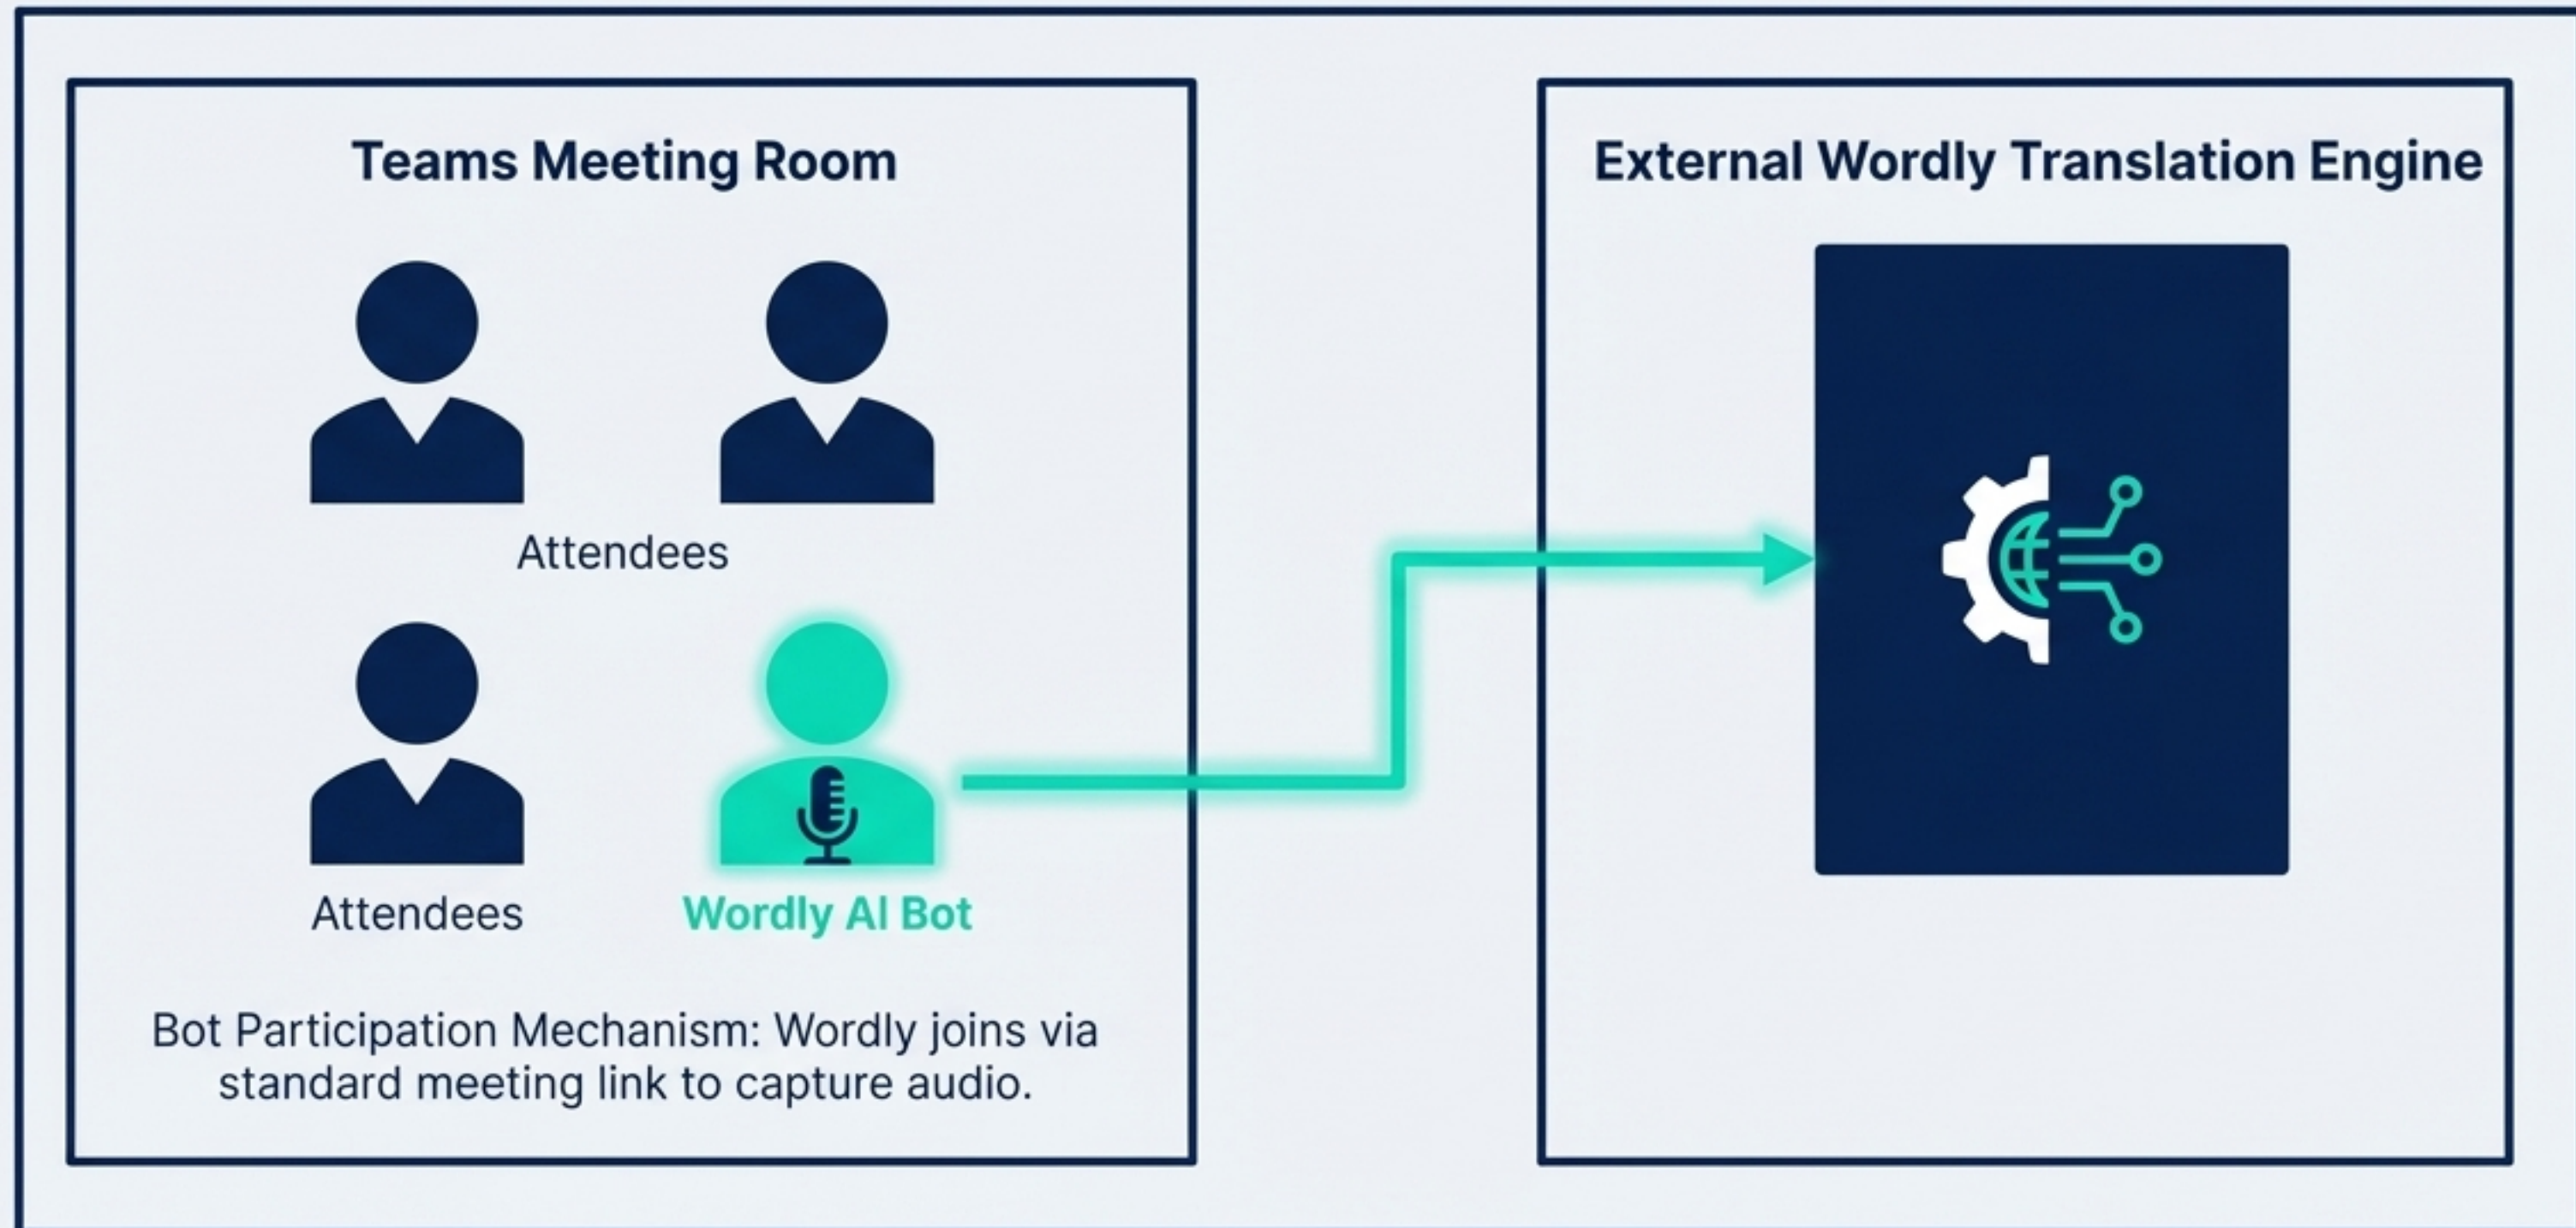

# Approach A: The Built-In Teams Experience

Relying solely on Microsoft's native ecosystem for interpretation and meeting summarization.

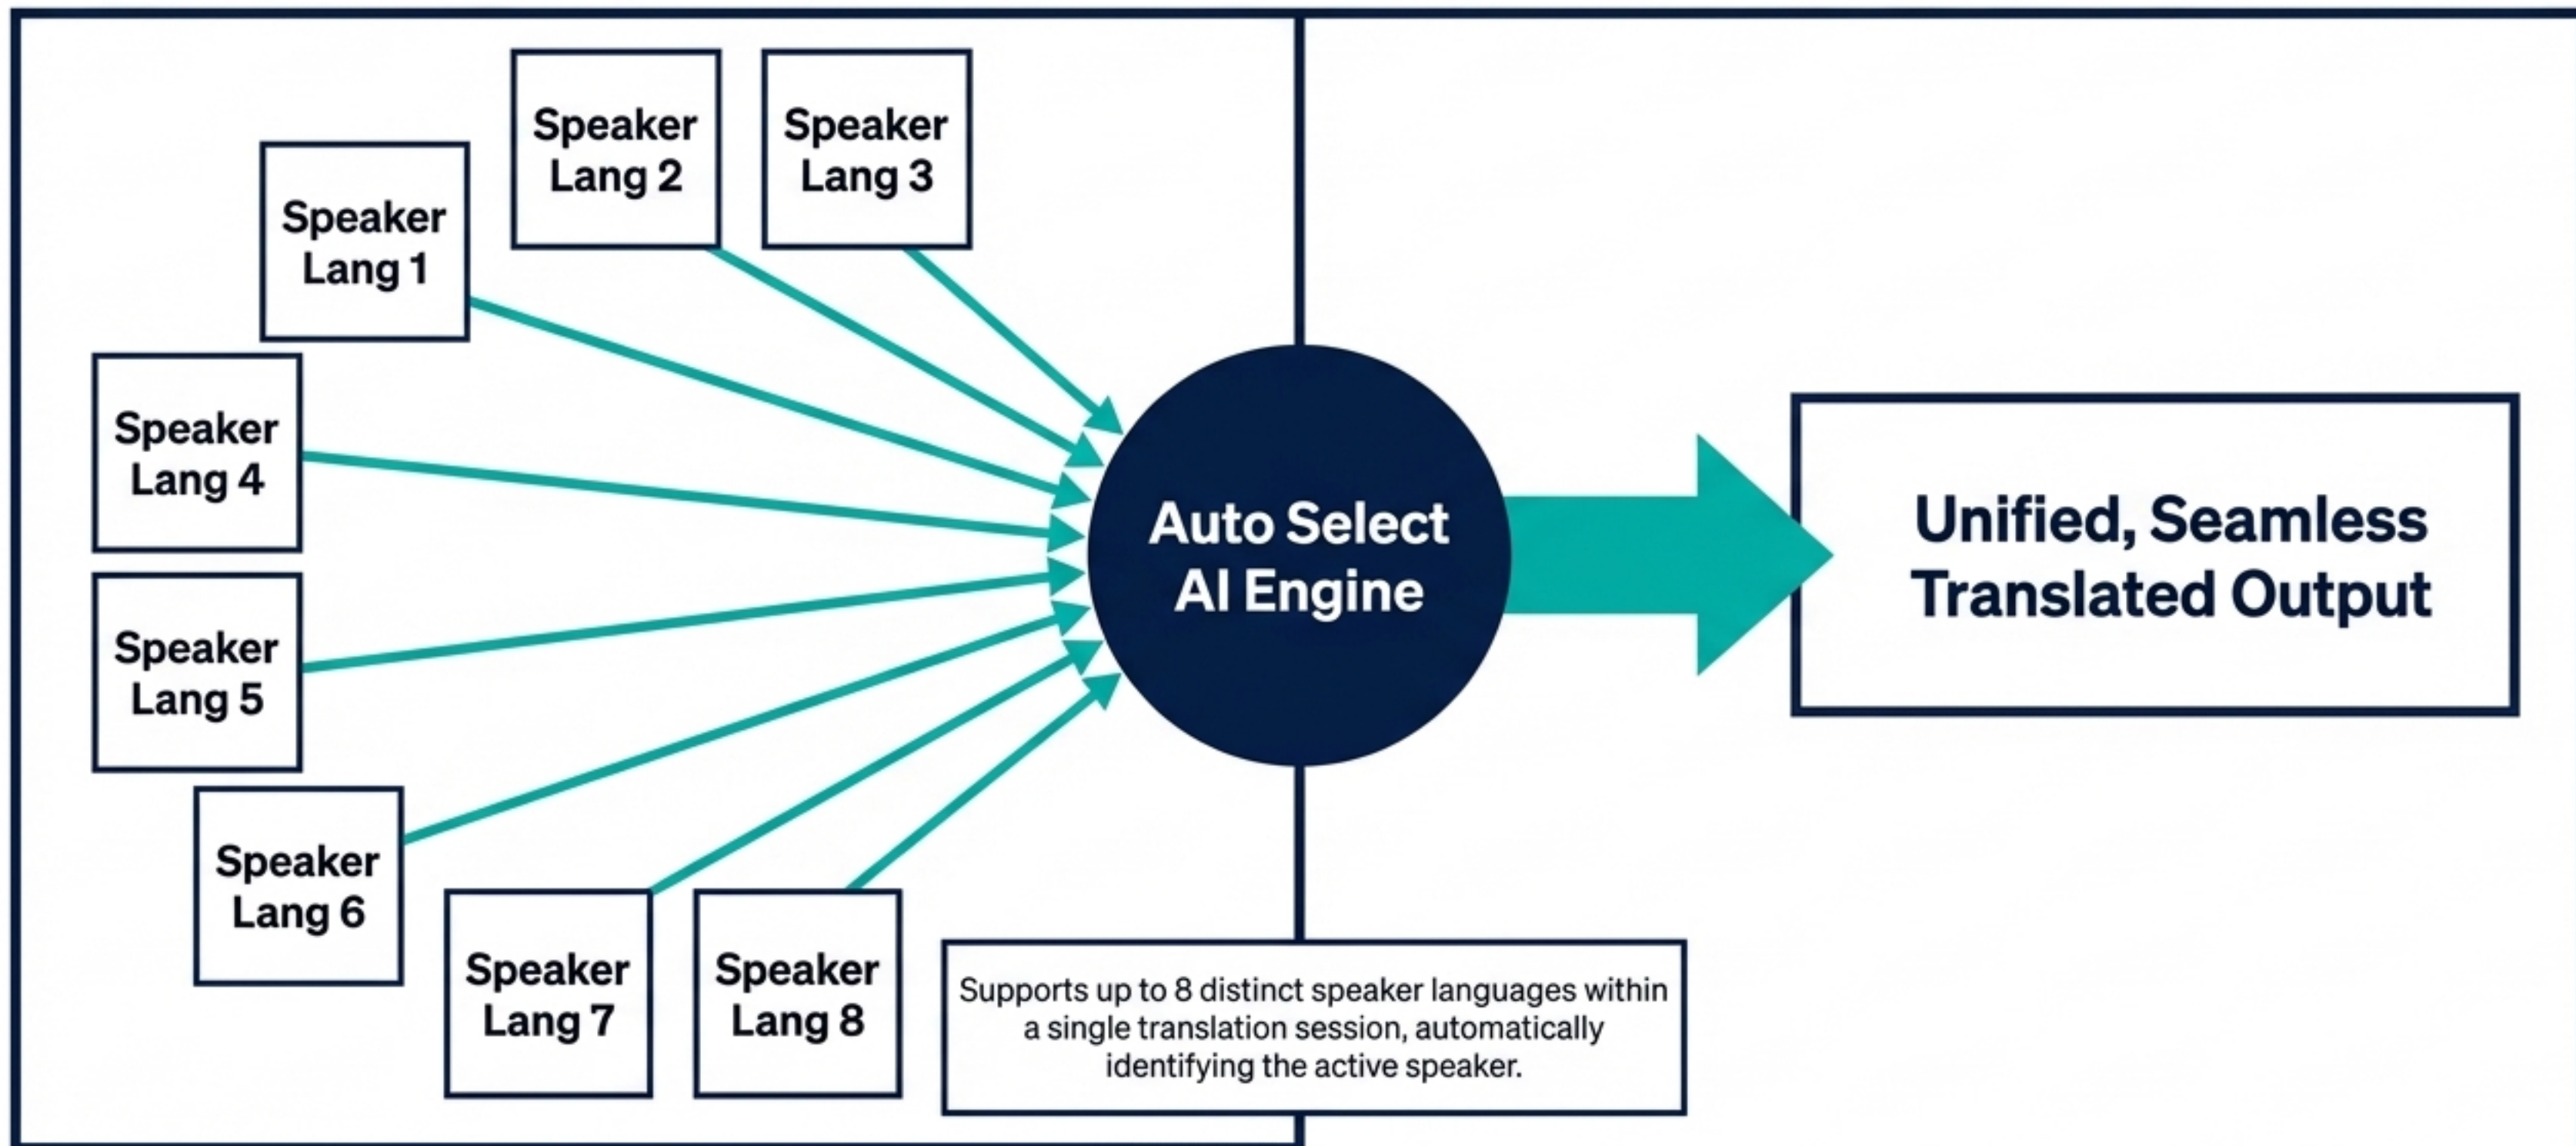

# Approach B: Teams + Wordly.ai Integration

Expanding capabilities by integrating an external translation engine via a dedicated meeting bot.

# Advanced Capacity: Multi-Language Auto-Switching

Designed for complex global scenarios, the combined setup eliminates manual language toggling during active discussions.

# The Attendee UX: Dual-Device Viewing

Attendees accessing Wordly translations do not operate within the Teams interface. They use a dedicated Wordly Attendee Link or QR Code.

# Post-Meeting Transcript and Record Management

Managing session data requires fundamentally different administrative workflows depending on the chosen setup.

## Teams Alone

### Integrated Workflow

Relies entirely on Copilot history directly within the Teams interface.

## Teams + Wordly.ai

### Independent Workflow

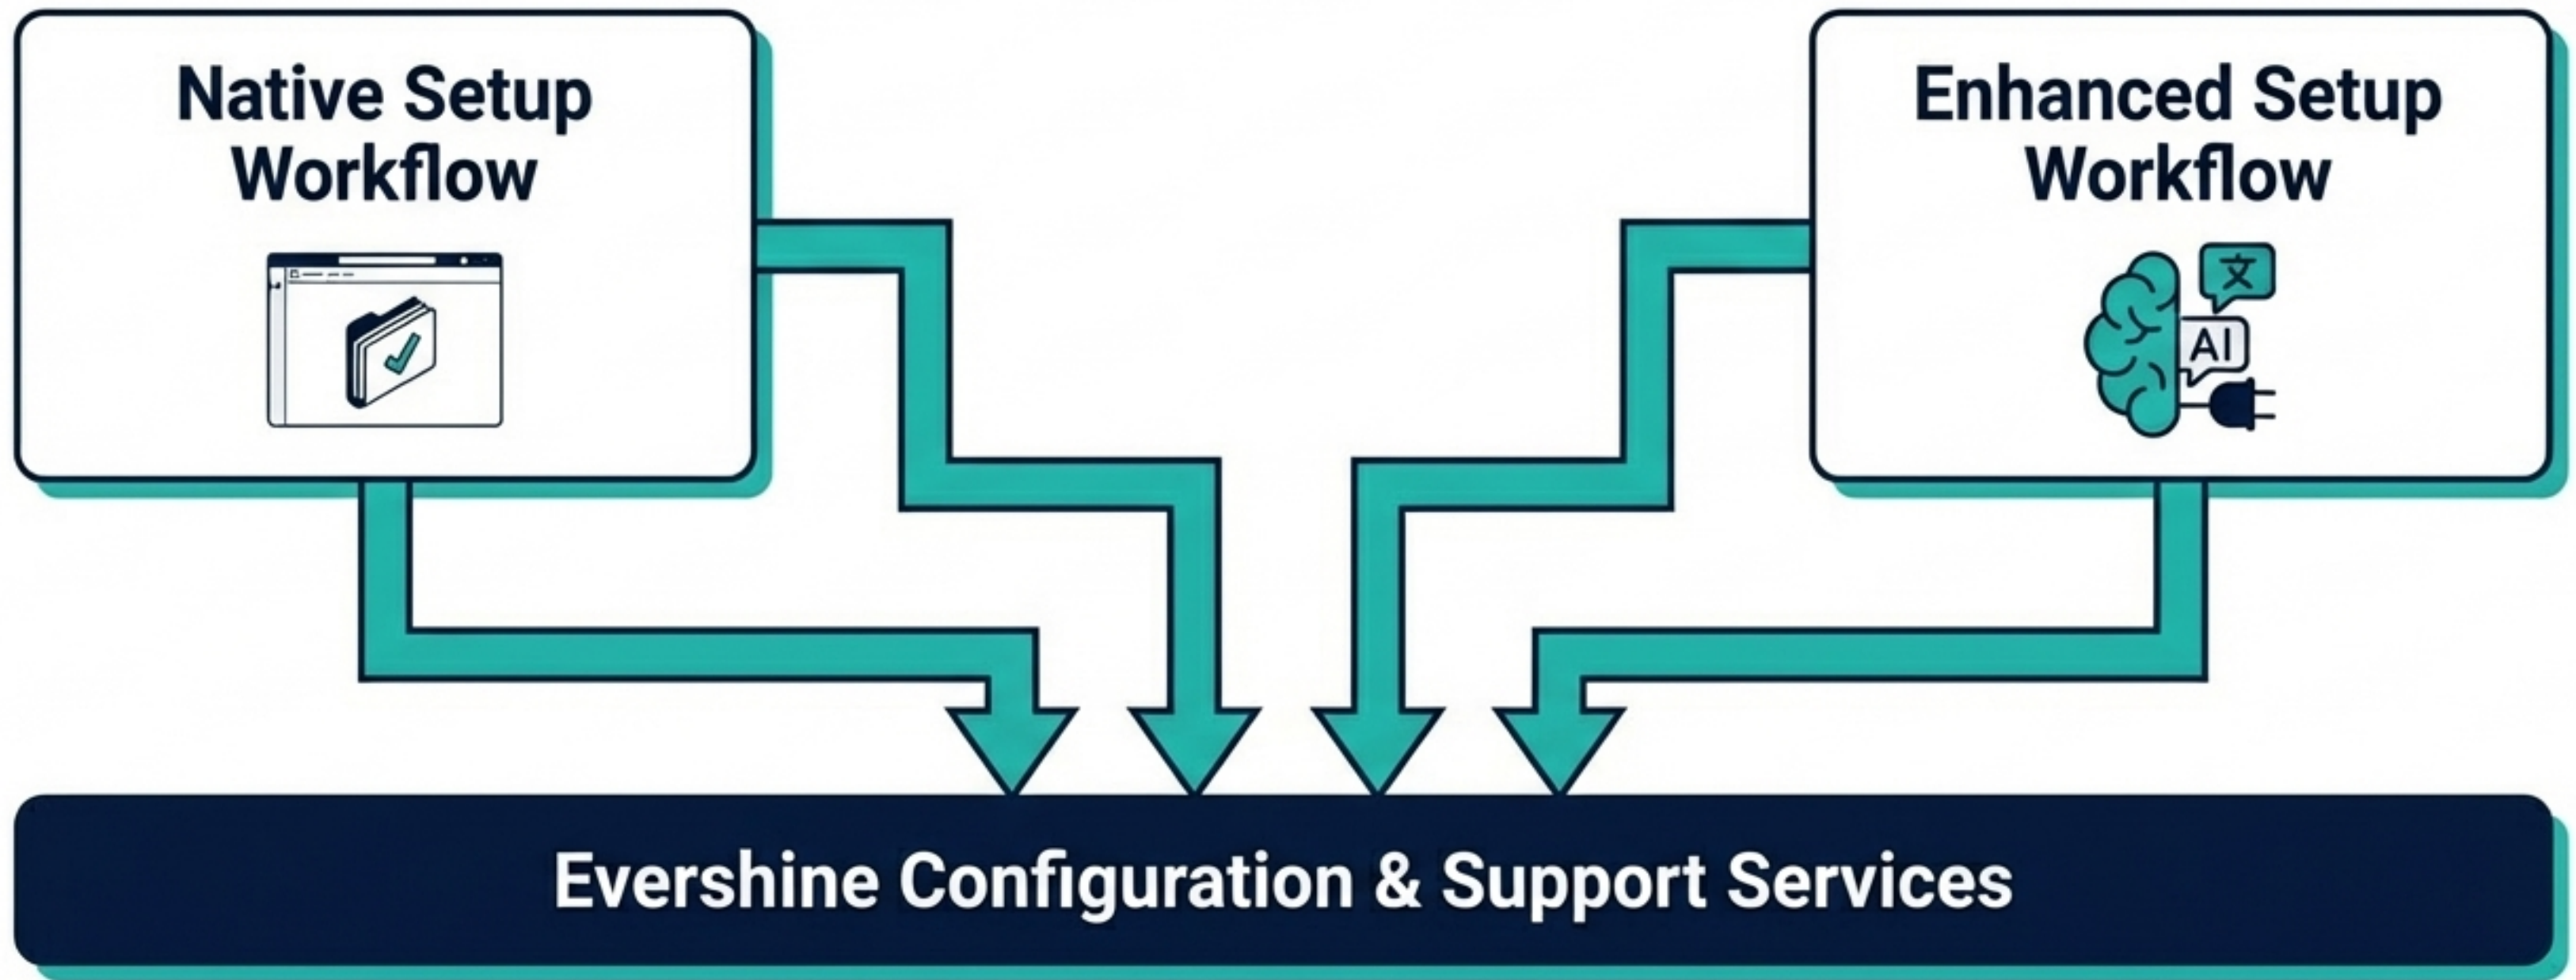

Admin must manually end the session and download transcripts directly from the external Wordly system history.

# Diagnostic Comparison Matrix

Capability	Teams Alone	Teams + Wordly.ai
Translation Engine	Built-in Copilot & Captions	External Wordly AI Engine
Max Speaker Languages	System Default	Up to 8 (Auto-Switch)
Viewing Interface	Single Interface (Teams App)	Dual Screen / External Link
Bot Requirement	None	Requires 'Wordly' Bot Attendee
Transcript Location	Inside Teams App	Independent System Download

# Seamless Implementation with Evershine

Whether relying on built-in Microsoft tools for standard meetings or deploying Wordly.ai plug-in bots for complex multilingual sessions, Evershine facilitates the precise configuration and language settings required for your global operations.
